

4TH APELIA ANNUAL CONFERENCE

THE GLOBAL DIMENSION OF THE DIGITAL REVOLUTION

We live in the age of the digital revolution – an age in which change is occurring at such a speed and scale that economic and social innovations have been flourishing. Emerging digital technologies – ranging from the Internet of Things to Artificial Intelligence – are dramatically transforming not only the ways in which we learn and elaborate knowledge, but also the ways in which we produce/distribute wealth, treat disease, create works of art, or exchange opinions. However, the fourth industrial revolution also raises challenging questions that policymakers and legal communities must resolve with coordinated and world-wide solutions, simply because digital technologies know no borders.
